

ABSTRACT

Method and system for controlling access to a platform for a mobile terminal for a wireless telecommunications system or for another product. The system includes a platform having a software services component and an interface component having at least one
5 interface for providing access to the software services component for enabling application domain software to be installed, loaded, and run in the platform. An access controller controls access to the software services component by the application domain software via the at least one interface. The access controller includes an interception module for receiving a request from the application domain software to access the software services component,
10 and a security access manager for determining if the permission request should be granted. The application domain software is granted access to the software services component via the at least one interface if the permission request is granted by the security access manager.
